

Back-end developer

Leganés, Madrid, España

Indefinido

Experiencia de 2 a 5 años

Job Brief

Bitergia is building the next major release of their software development analytics platform to ease its deployment, management, maintenance, and integration on the increasing number of customers we have. Built on top of GrimoireLab project, Bitergia Analytics Platform users base is growing in the size and complexity of the projects to analyze.

This is your chance to help us disrupt the software development analytics tools market applying modern cloud and PaaS technologies to build the new platform for our customers.

Salary range of 30K - 35K € / year.

Responsibilities

- Optimization of the platform reliability and scalability.
- Participating in the overall application lifecycle.
- Applying best practices for code maintenance and test coverage
- Collaborating with the front-end developers and other team members to establish objectives and design and implement features to enhance the user experience.
- Participating in continuing education and training to remain current on best practices, learn new programming languages, and better assist other team members.

Requirements

Must have

- 3+ years of experience as back-end developer with proficiency with Python,
- Experience with cloud technologies and related solutions like containers, orchestration, etc.
- Experience with collaborative development tools like Git, and GitHub, or GitLab
- Proficiency in English
- Motivation to learn new skills and technologies
- Critical thinker and problem-solving skills
- Good time-management skills
- Great interpersonal and communication skills

Nice to have

- Cloud native development experience and proven track record
- Hands-on experience with Elasticsearch and Kibana
- SQL (MySQL or MariaDB) and Python ORM libraries (SQLAlchemy, elasticsearch-dsl)
- Technical writing experience, that could include blogs, tech recipes, or software documentation
- Free, open source software knowledge and background
- Participation in technical communities
- An outgoing, friendly personality, and a desire to meet new people
- Excellent presentation and creativity skills

Descripción de la empresa

For IT Managers who need to understand how the software that matters to them is being built, Bitergia provides data and metrics about the software development teams and their processes. Unlike spending time self developing their own solution without a clear strategy or using a solution with a limited set of answers to their questions, Bitergia provides a ready- to-use platform and professional services to improve IT management performance.

During its 8+ years of history, Bitergia has become a reference in open source and innersource software development analytics. It is an active member of The Linux Foundation CHAOSS (Community Health Analytics for Open Source Software) and the InnerSource Commons projects. And some of its customers include open source foundations like The Linux Foundation or the Apache Software Foundation, well known open source companies like Red Hat, companies relying on open source technologies or innersource methodologies like Uber or Autodesk.
